Monthly Summary

The NAV of CERVINO (I) went up by 3.6% during May (share class I). In 2025 the accumulated return is 2.3% which represents 177,4% since inception, and a CAGR of 6,4%.

May saw the continuation of the equity market rebound that began on April 9, following President Trump's announcement of a tariff truce. Global equities rallied 5.5% (MSCI World), with nearly all major regions posting comparable gains.

The temporary de-escalation of trade tensions with China, announced on May 13 after the launch of formal negotiations between the two governments, served as the key catalyst behind this move. As a result, both U.S. and European equity indices are now trading close to their previous highs. Is this rally justified? On the one hand, there are arguments in favor: the most notable being that, so far, macroeconomic data do not show any meaningful impact from the tariff police – neither in terms of GDP growth nor inflation –. However, there are also reasons to remain cautious: 1. Business sentiment indicators and manufacturing surveys are pointing to a clear deceleration in activity.

2. U.S. long-term Treasury yields have once again risen above 4.5%, the same level that prompted Trump to soften his rhetoric back in April. This suggests that markets are reapplying pressure, now in response to the perceived unsustainability of projected debt and deficit levels, especially if Congress proceeds with the approval of the “Big and Beautiful Bill” – a complex legislative package aimed at deep tax cuts and positioned as the second cornerstone of Trump's strategic agenda. –

3. Corporate commentary remains highly cautious, reflecting investment paralysis and uncertainty regarding the near-term earnings outlook.

All in all, it seems that markets never fully priced in a recession scenario during the downturn, nor are they now adequately reflecting the potential consequences of persistent political volatility. In our view, the most reasonable outlook is that the next 6–9 months are likely to remain challenging and volatile, as markets digest the final impact of the tariff framework and seek greater clarity around the broader Trump policy agenda.

Over the course of the month, more than 20 portfolio holdings delivered returns in excess of 5%. Standouts included SoftwareOne (+38%, after receiving approval for its merger with Norwegian firm Crayon Group), First Solar (+26%, supported by a draft version of the new tax law that reduced renewable energy subsidies less than expected), Piraeus Bank (+26%), and Taiwan Semiconductor (+16%). On the downside, 14 positions ended the month in negative territory, led by Fiserv (-10%, following a somewhat disappointing earnings release), Moderna (-7%, after the cancellation of a major contract with the U.S. Department of Health), Baidu (-7%), and Berkshire Hathaway (-5.4%, impacted by the somewhat unexpected announcement that Warren Buffett will step down, with Greg Abel set to take over by year-end).

In terms of recent activity, we increased our exposure to Fiserv following the pullback, and added to our position in First Solar (initially added in April). In fixed income, we invested in Banorte hybrid bonds, and senior bonds from Pemex and Atos—all offering attractive yields to maturity.
